

AIRBORNE GEOPHYSICAL TECHNICIAN

Dias Airborne is a scientific/technical geophysical services company with a focus on mineral exploration. We are looking for adventure-seeking individuals with a passion for travel & working in remote environments. The outdoors is your office. This is a field-based role.

ROLES & RESPONSIBILITIES

- Install, maintain, and troubleshoot airborne geophysical equipment.
- Downloading and validating geophysical data using proprietary tools.
- Some work in Saskatoon workshop & office may be required between field assignments.
- Monitoring aircraft flight tracking and working with cryogenic fluids.
- Embracing our progressive HSE practices and procedures

HERE'S WHAT YOU'LL NEED

- Previous Airborne Geophysical survey experience an advantage.
- Strong problem-solving skills.
- Ability to work with tools and materials.
- Practical hands-on experience in operating, maintaining, and troubleshooting electronic equipment including GPS.
- Competent computer skills (Microsoft Office, FTP, other software tools).
- Ability to multi-task and work in a fast-paced environment.
- Comfortable in and around helicopters and occasionally required to fly in one.
- Ability to lift and manipulate objects of up to 50lbs.
- Effectively communicate in English - written and spoken
- Adherence to HSE systems and safe work attitude.
- Legally able to work in Canada
- Able to travel domestically and internationally.

WHAT WE OFFER

- Accommodation from hotels to tents in remote locations.
- Benefits package - including comprehensive health & dental coverage.
- Regional & International work opportunities without relocation! We will arrange direct transport from most urban centers throughout Canada.
